

Ausco earns sixth patent in six years

Benton Harbor, Michigan – Ausco Products, Inc. continues its history of innovation in off-highway braking. Ausco has received word from the US Patent and Trademark Office that it is being awarded its sixth patent in less than six years. This patent is for an adjustable spring-applied-hydraulically released caliper brake developed for large construction and agricultural equipment. Specific features include a sealed end plate which prevents corrosive damage to internal components making the caliper able to survive in the toughest environmental conditions and an adjuster locking mechanism, which prevents misadjustment due to shock and vibration. In addition, Ausco has nine patents currently being reviewed by the USPTO and two more being readied for submission. With its world class engineering creating innovative problem-solving solutions, Ausco remains the world leader in off-highway braking.
